- Make Real-Time ____ section in read me a bullet point
- Explain roles in assumptions
- Say only users with manager role can manage a dining hal in assumptions
- Make assumptions also include notes (like EX: explaining that favorites can be many, not just THE favorite)
- Hours should be a separate entity (or it could just have double parentheses)
- We should make the current_capasity a derived attribute because if its an attribute it would be changing so much it wouldn't be realistic
- Open status should be derived
- Dietary restrictions should be computed on the fly instead of keeping the info for each person. There would be a query that joins where the menu_item_restictions and user_restrictions where they are not the same.
- Name swipes should be swipes remaining.
- Change role in user to is_manager
- Add swipes to user_meal_plan
-
